BHA® Pleated Filter Elements
Increased performance.
Maximum quality.
BHA pleated filter elements from CLARCOR Industrial Air can provide maximum benefits through increased production and reduced operational costs.

With today’s demands of increased production and tighter emission controls, dust collectors can be pushed beyond their design limits. If they fail to keep up, production and profitability suffer.

As an alternative to traditional filtration technology, CLARCOR Industrial Air produces an innovative and extensive family of pleated filter elements that offers proven performance and durability. With more than 4 million units sold to date, BHA PulsePleat® filter elements along with BHA ThermoPleat® options deliver valuable benefits:

- Provide superior filtration efficiency
- Promote better airflow for increased throughput
- Reduce air-to-cloth ratios
- Reduce operating differential pressure
- Reduce compressed air consumption
- Eliminate the need for cages
- Are easily installed and removed

Best of all, installation typically requires no modification to existing equipment. With CLARCOR Industrial Air, you can enjoy improved performance and energy savings without the expense of costly modifications.

The Original Pleated Technology

BHA Pleated filter technology from CLARCOR Industrial Air produces a one-piece element that can significantly reduce installation time and costs. Each element is custom manufactured to maximize the benefits of your unique process. BHA PulsePleat filter elements may also increase the filtration area inside your baghouse 3-4 times, and dramatically reduce your differential pressure and air-to-cloth ratios.
Whether used in new systems or serving as retrofits to existing dust collection equipment, BHA PulsePleat filter elements prove to be a versatile and cost-effective solution.

BHA iPLAS® pleat alignment and retention system replaces conventional strapping methods (utilizing fabric straps and adhesive) that are susceptible to chemical and hydrolytic attack.

BHA iPLAS keeps the pleated media in place, eliminating failures of the filter element due to over-flexing and pleat reversal. BHA iPLAS is available only with CLARCOR Industrial Air pleated filter elements.

Molded polyurethane top is available in a variety of styles and sizes to fit a wide range of tubsheet holes. Other materials or designs are available for higher temperatures and unique applications.

One-piece design eliminates the need for filter bags and cages, significantly reducing installation time.

Spunbond polyester media provides 99.99+% filtering efficiency.

Inner core (BHA PulsePleat and BHA ThermoPleat) is constructed from polypropylene or metal, depending on your application needs.

Pleat depth and spacing are customized for specific applications to allow for improved dustcake release. The pleated design increases filtration surface area up to 3-4 times.

Specialty finishes available, including BHA Preveil® ePTFE membrane.

iPLAS “formed-in-place” design anchors pleat tips firmly, keeping them evenly spaced and straight pleats aligned while element is in operation.

Molded bottom helps resist abrasive wear at the bottom of the elements.
Spunbond Media

BHA PulsePleat media is unlike any traditional felt or woven fabric. Manufactured by the layering and calendering of fine denier fibers, it features a tight pore structure that better resists particulate penetration. Physically rigid, it can hold a pleat without the support of backing material and withstand temperatures up to 265° F (130° C). Spunbond media, when pleated and molded into a PulsePleat filter, can increase filtration surface area 3 to 4 times more than conventional filter bags. This can lead to a dramatic increase in filtration efficiency while operating at a significantly lower differential pressure.

### Differential Pressure Comparison

### Additional Performance Information

CLARKOR Industrial Air filtration media tested to American Society of Heating, Refrigeration and Air Conditioning Engineers (ASHRAE) Standard 52.2
- Standard spunbond polyester: MERV 10 (minimum efficiency reporting value)
- Spunbond polyester with BHA Preveil membrane: MERV 16
BHA ThermoPleat Pleated Filter Elements

BHA ThermoPleat high-temperature filter elements provide superior quality and performance for upgrading and improving existing dust collection systems. Each element is constructed with patented, high-density media stiffened by non-resin, state-of-the-art thermal bonding technology. BHA ThermoPleat filter elements are a direct replacement for standard filter bags and cages and can withstand operating temperatures as high as 375° F (191° C). While working in these applications, the substrate fabric maintains excellent physical properties and dimensional stability.

Construction Features

- Strong, heat-resistant media
- Wide, open pleat spacing and shallow pleat depth
- High filtration efficiency
- Perforated metal inner core
- High-temperature BHA iPLAS strapping system
- Metal top and bottom construction
- Customized lengths and diameters
- Customized pleat counts

Benefits of BHA ThermoPleat

- Media allows for higher operating temperatures
- Designed to eliminate filter bags and cages
- Reduces air-to-cloth ratios dramatically
- Reduces abrasion problems
- Provides a larger dropout area
- Increases filtration area
- Reduces operating differential pressure
Specifications and Options

Each fabric filter dust collector operates under a unique set of characteristics and system parameters. Choosing the filter type best suited to the application requires evaluation of the following variables:

- Temperature
- Particulate Size
- Air-to-Cloth Ratio
- Mechanical Factors
- Moisture Level
- Gas Stream Chemistry
- Particulate Abrasiveness

### Media

- Spunbond Polyester
- Stiffened Polypropylene
- Spunbond Polyester
- Aramid
- PPS

### Tops

- Molded Polyurethane for Top- and Bottom-Load Styles
- Injection Molded EPDM or Silicone for Top- and Bottom-Load Styles (white EPDM available for food-grade applications)
- Hard Polyurethane (top-load styles only) installed with Snapband Cuff or EPDM Cuff
- Galvanized or Stainless Steel Metal (top-load styles only) installed with Snapband Cuff
- Flange-Style Top-Load

### Inner Cores

- Polypropylene
- Perforated Metal
- Expanded Metal (each available in galvanized or stainless steel)

### Bottoms

- Galvanized or Stainless Steel Pan
- Hard Polyurethane Puck

### Maximum Operating Temperature

- • Aramid
- • PPS
Available element sizes
Standard top-load tubesheet hole diameters are available in sizes ranging from 4½ in. (114.3 mm) to 8 in. (203.2 mm) for 3/16 in. and ¼ in. thick tubesheets.

Bottom-load styles
Load styles for common bag cup/venturi configurations such as:
• MikroPul®
• Flex-Kleen®
• Wheelabrator®
• Fuller®
• United Conveyor

Note: Not all designs are available in all sizes.

Special top designs
Elements designed to fit:
• Wheelabrator® recessed hole
• MikroPul®
• Aeropulse® “3-Notch”
• Euro MikroPul
• General Resources™
• Oval RF (Carter Day®, Donaldson®, Howden®)

Media options
• Spunbond polyester (standard)
• Spunbond polyester with oleophobic treatment
• Spunbond polyester laminated with BHA Preveil ePTFE membrane
• Conductive media available
• Spunbond polypropylene
• Stiffened aramid felt (available with BHA Preveil ePTFE membrane lamination)
• Stiffened PPS felt (available with BHA Preveil ePTFE membrane lamination)

Specialty finishes available to fit particular applications.

Construction options
• Higher temperature components
• Customized lengths and diameters
• Customized pleat counts
• iPLAS is standard on all elements up to 375°F (191°C)
• Designs available for indirect dry food contact applications (US FDA 21 CFR 177-2600(d), CFR 177-2600(g), CFR 177-2420, CRF 177-1630)
Applications

Here are a few of the many different applications where BHA PulsePleat filter elements have improved system performance. Contact your CLARCOR Industrial Air sales representative to discuss your particular application. We custom manufacture BHA PulsePleat, BHA ThermoPleat and BHA SimPleat elements to fit nearly any OEM style of pulse-jet baghouse. CLARCOR Industrial Air engineers can help you select the right media, size and construction to fit your collector without capital modifications.
